The **Airpak** series receivers are full function, high performance digital fiber optic modules. They provide a cost effective interface between standard **ECL** and **PECL** logic families and optical fiber transmission systems. The innovative application of high-quality surface mount technology and a unique integration of optical and electrical components provide performance and quality without the traditional high cost packaging usually associated with optical modules. The superior reliability engineering on which the modules are based ensures performance in all normal environments and operating conditions.
